

Project Proposal: FollowMe – 3W Management System

Project Title: FollowMe – A Web-Based 3W Task Management and Accountability System

Project Author: Peramannage Kasun Vimarshana

BEng (Hons) Software Engineering – Top-up

ESOFT Reg No: 00238397

1. Project Background & Problem Statement

Task management within most businesses relies on static spreadsheets or disparate systems. This generates fuzzy roles, late deadlines, ineffective inter-departmental coordination, and inadequate visibility into progress monitoring. Manual procedures increase the likelihood of miscommunication, reduce accountability, and slow down productivity.

2. Project Aim

To design an Internet-based task management system that increases organizational accountability, aids in communication, and eases monitoring of tasks using a formal and scalable 3W (What, When, Who) system.

3. Objectives

- Apply the 3W scheme to offer unambiguous task assignment and schedules.
- Offer departmental and user-based task monitoring.
- Show real-time updates and automatic reminders for task status.
- Offer secure authentication and authorization using Active Directory.
- Make reporting dashboards for decision-making and analysis of performance.
- Produce a responsive and user-friendly UI for easy access.

4. Scope of the Project

In Scope:

- Task creation, assignment, tracking
- Role-based user management
- Notifications for email and system alerts
- Uploading task-related files
- Reporting generation and dashboard analytics
- Integration with LDAP / Active Directory
- Web UI (responsive and accessible)

Out of Scope (Initial Phase):

- Mobile app
- Integration with third-party project management tool

5. What is 3W?

What: Clearly defined task or deliverable

When: Deadline or due date

Who: Responsible person or team

This structure ensures transparency, accountability, and productivity by eliminating ambiguity in task delegation.

6. Key Features

- Department and user-wise task tracking
- Real-time 3W task updates
- File/resource upload support
- Automated alerts for task deadlines (email/system)
- Role-based access control (Admin, Manager, Staff)
- Performance dashboards and report generation

7. System Architecture

Layer	Technologies
Presentation Layer	HTML/CSS, Vue.js (Planned)
Business Logic Layer	Laravel (PHP Framework, REST APIs)
Data Access Layer	Repositories, Models
Database Layer	MySQL (Normalized)
Authentication Layer	LDAP / Active Directory Integration

7. Technology Stack

- Backend: Laravel (REST APIs)
- Frontend: HTML, CSS, JavaScript (Vue.js – planned)
- Database: MySQL
- Authentication: Active Directory (LDAP)
- Deployment: Web Server (Apache/Nginx)

8. Methodology

- Agile Development Lifecycle
- Requirements Analysis
- System Design
- API Development
- Frontend Prototyping
- Unit & Integration Testing
- Continuous Feedback & Iteration

9. Uniqueness of the Project

- Structured 3W task framework for improved clarity and responsibility
- Tailored departmental and user-level task monitoring
- Real-time alert and notification engine
- Centralized resource repository for each task
- Seamless integration with enterprise tools (Active Directory)
- Simplified, role-based, and analytics-rich experience

11. Future Improvements

- Mobile app for iOS and Android
- Calendar/scheduler view for tasks
- Integration with third-party services (Slack, Teams)
- AI-based task prediction and prioritization
- KPI-based performance tracking

12. Conclusion

The FollowMe – 3W Management System will provide a powerful yet simple platform to help organizations replace manual task tracking with a real-time, automated, and structured solution. It emphasizes accountability, communication, and productivity making it ideal for both SMEs and large enterprises.
